

Company:
New Image Labs

Software Used:
Barcode +

Cycle Counts and Receiving Verification For Less

Summary:

This manufacturer of hair replacement products uses Barcode+ to accomplish critical business operations such as inventory Cycle Counts and scanning Received items. New Image required small modifications to Barcode+ that allowed them to increase the efficiency and effectiveness of their barcode scanning implementation. By incorporating a function to check for a Start character on their barcodes Barcode+ was able to reduce data entry mistakes and increase the speed of verifying received items.

Barcode+ is a customizable multipurpose data collection and management tool that was built to handle numerous situations and data collection requirements. Barcode+ uses 4 customizable data groups each with 8 customizable fields to store information, look up entries instantly using a barcode scan, edit item information and send this information to a desktop computer.

Barcode+ was designed for both Palm and Windows Mobile platforms and works on a variety of barcode scanning devices like the Aceeca Mezura, the Janam XP30, the Symbol MC50 and MC70, Unitech PA500 and PA60, the Janam XM60 and XM65. Barcode+ includes a desktop application that's used to customize data groups, import data, view data and synchronize data to and from the barcode scanning device.
